

#1C: therohan karthikeya

MY ENIGMA NUMBER:

$$E = \underline{2,285,304}$$

1C: C-FOURCHOCOLATE

MY N:

$$N = 30 + (\text{Remainder of } (E \div 70))$$

$$N = 30 + 14 = 44$$

Q1) GUESS:

$$44 \times 39$$

Q2) EXAMPLE:

PAIR	STEPS PROCESS	NO. OF STEPS
(11,6)	$(6,5) \rightarrow (5,3) \rightarrow (3,2) \rightarrow (2,1) \rightarrow (1,1)$	5
(13,8)	$(8,5) \rightarrow (5,3) \rightarrow (3,2) \rightarrow (2,1) \rightarrow (1,1)$	5
(16,10)	$(10,6) \rightarrow (6,3) \rightarrow (3,2) \rightarrow (2,1) \rightarrow (1,1)$	5
(21,13)	$(13,8) \rightarrow (8,5) \rightarrow (5,3) \rightarrow (3,2) \rightarrow (2,1) \rightarrow (1,1)$	6
(34,21)	$(21,13) \rightarrow (13,8) \rightarrow (8,5) \rightarrow (5,3) \rightarrow (3,2) \rightarrow (2,1) \rightarrow (1,1)$	7

Q3) (34,21) is the smallest step as it took 7 steps.

$$\Rightarrow 21 = 13 + 8 \Rightarrow (21, 13)$$

$$\Rightarrow 13 = 8 + 5 \Rightarrow (13, 8)$$

$$\Rightarrow 8 = 5 + 3 \Rightarrow (8, 5)$$

$$\Rightarrow 5 = 3 + 2 \Rightarrow (5, 3)$$

$$\Rightarrow 3 = 2 + 1 \Rightarrow (3, 2)$$

$$\Rightarrow 2 = 1 + 1 \Rightarrow (2, 1)$$

(1,1) Last part break

So there will be 0

ANALYSIS
OF GIVEN EXAMPLE

EXPLANATION:

The slowest step occurs on (a, b) . Here (a, b) is $(34, 21)$. As I carefully observed the splitting process.

This pattern is known as Fibonacci Series. As per my observation, the consecutive pattern pair became the slow step.

Therefore, consecutive fibonacci numbers takes the most step. //
